FMCG Sales Analysis - Business Insights

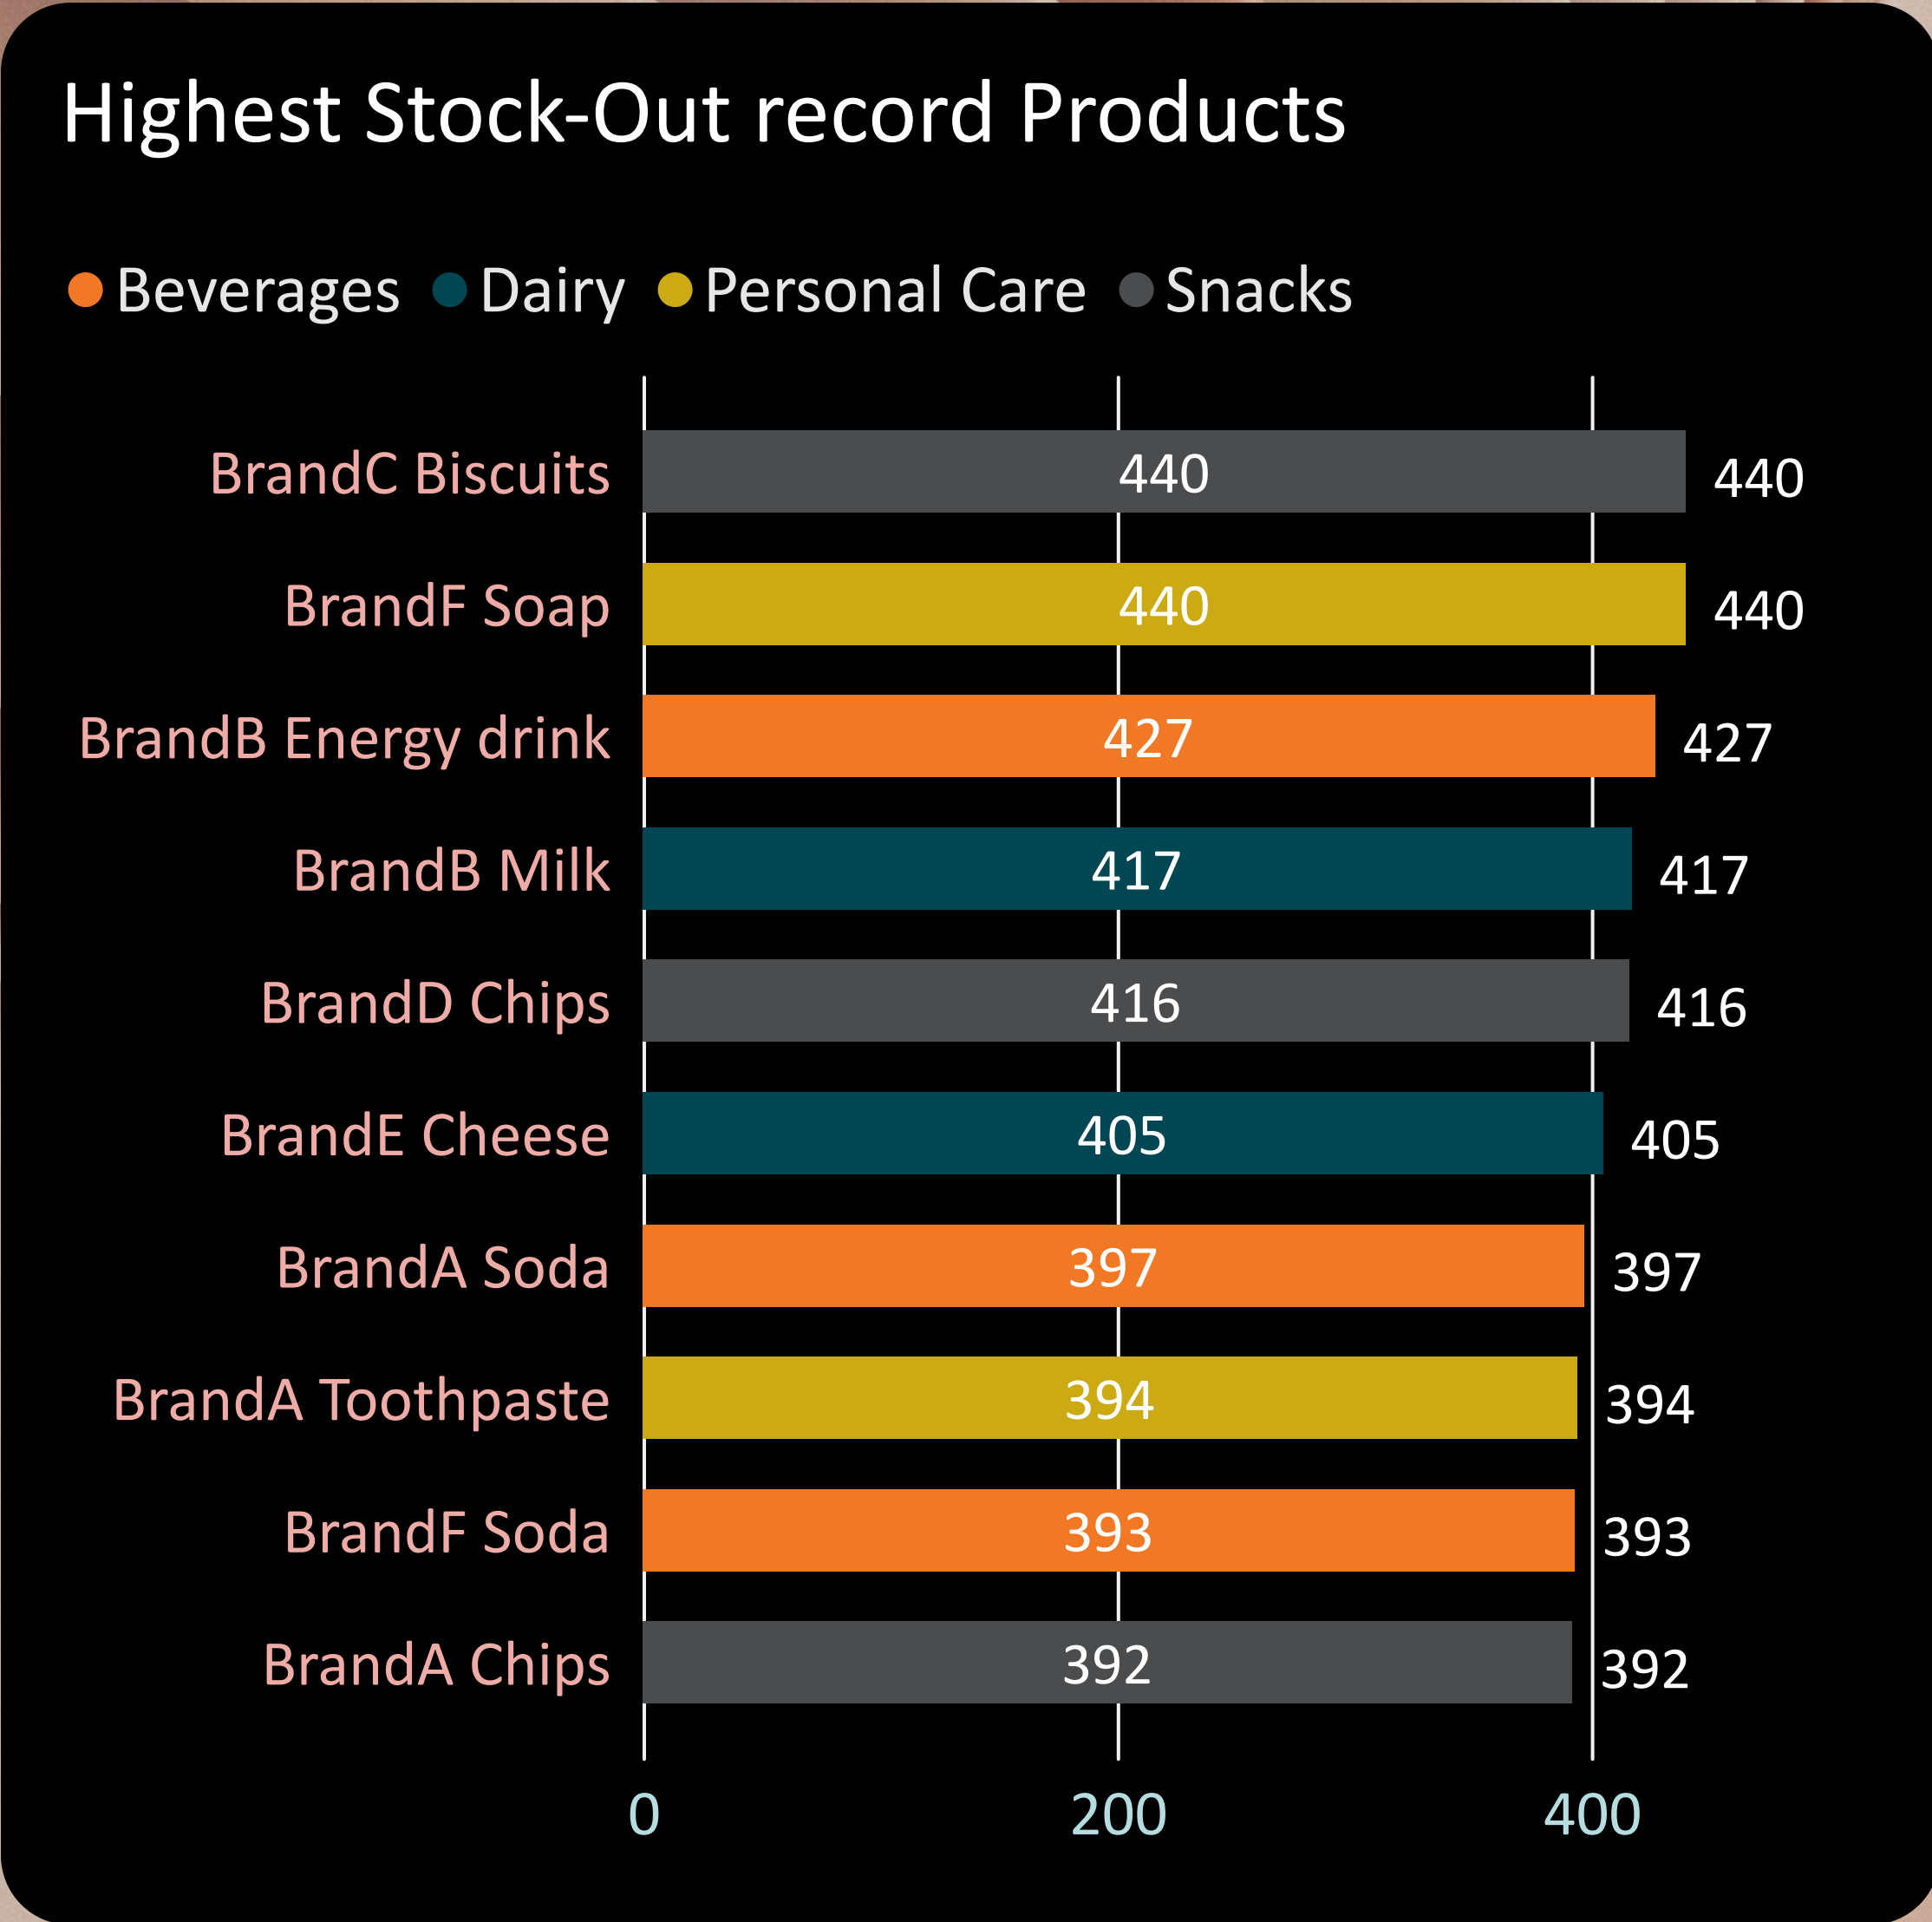

Sales growth rate from 2021 to 2022 was 0.16%. Then it went down again in 2023, which was - 0.16%. So in a sense, we can say that overall business has no variation/growth.

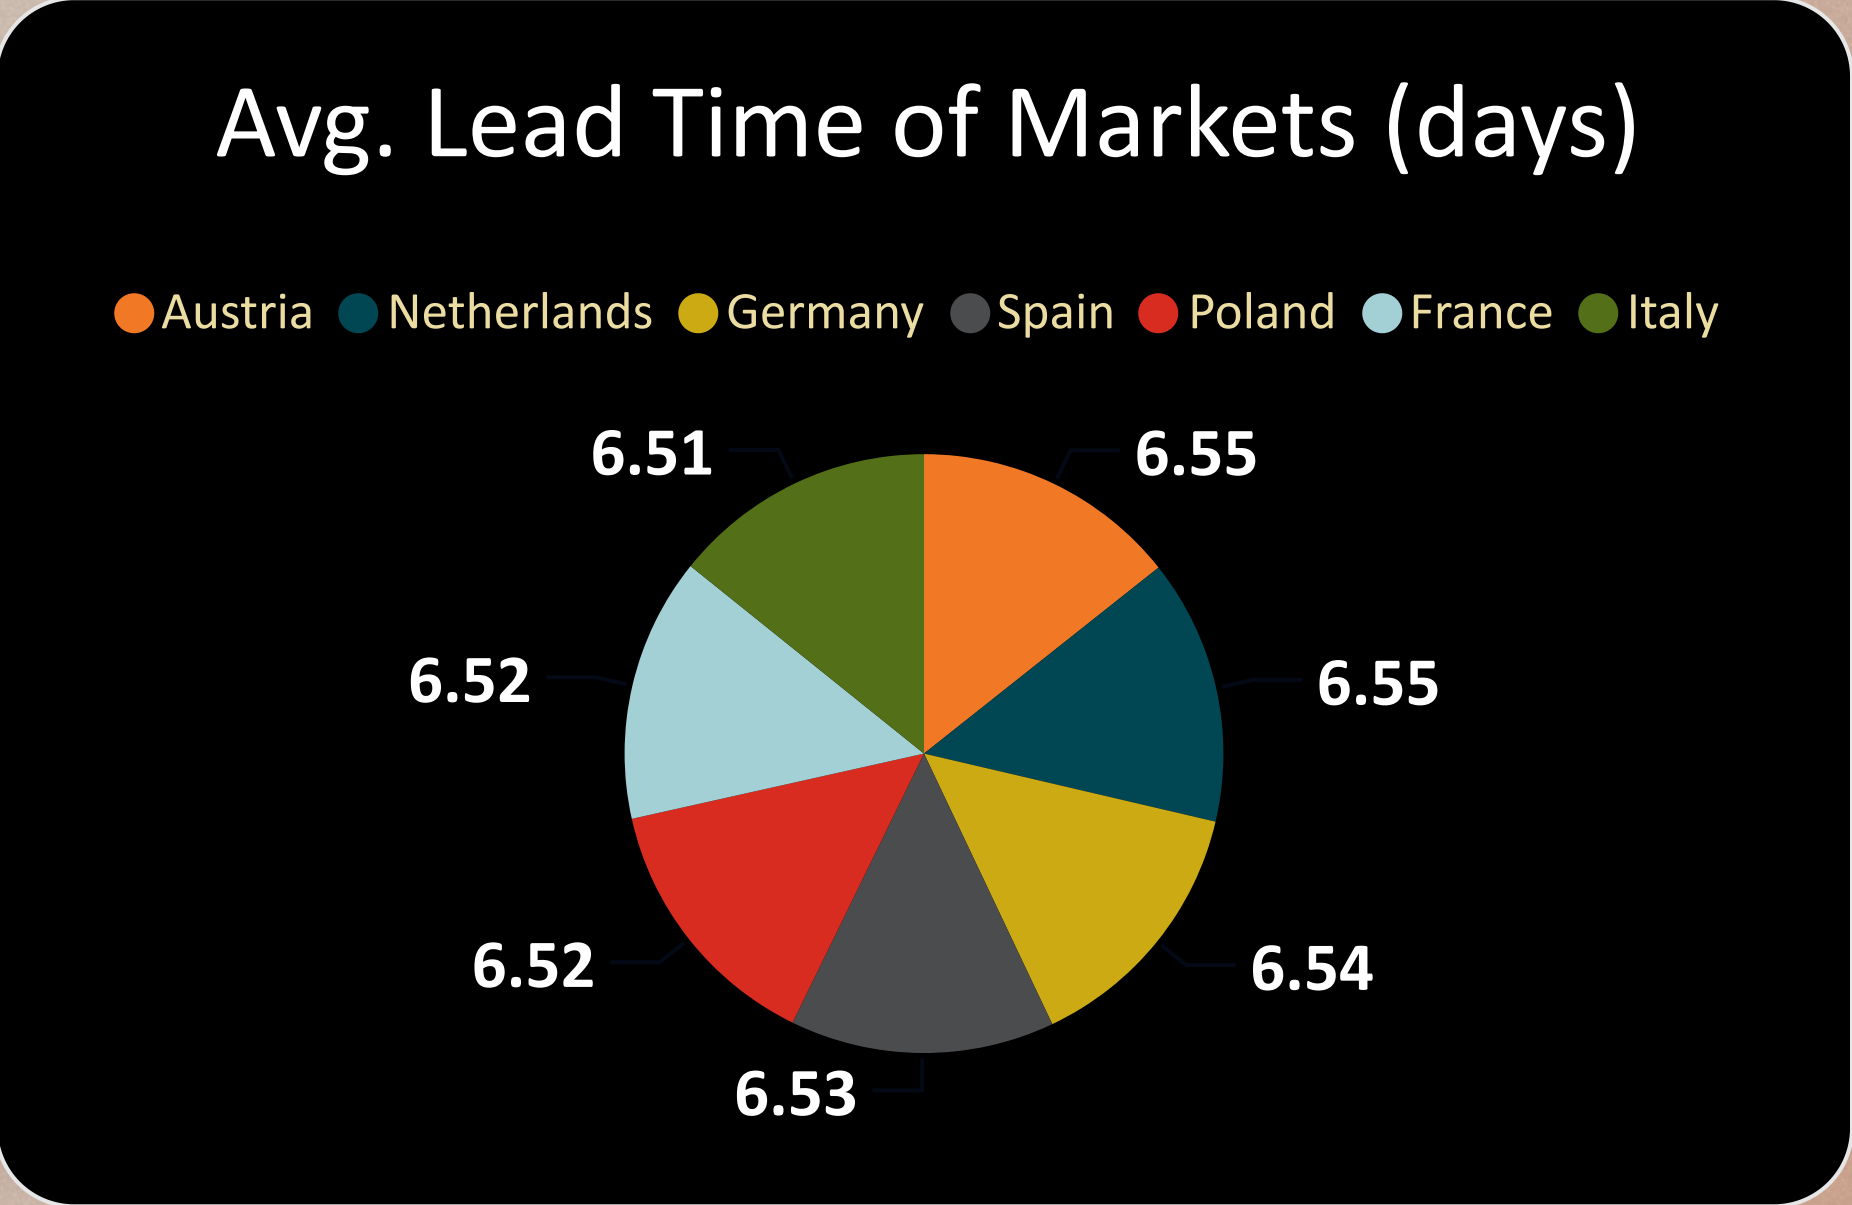

From this donut chart, we can see that 89% of total sales actually came from without discounts! So i don't think its necessary to give discounts

The column chart shows top 10 most popular revenue generating products. So These products should have absolute priority on maintaining stocks and minimizing avg. delivery time

These products should be under constant monitoring as some of them are crucial for generating high revenue

Here we can see that, avg. lead time of each market is almost same (6.5 days), which is a good point , considering that the suppliers can reach to any market in almost same times
